Empirical descriptor response: Ha vs product TOF
Historical single-species energies; strict CatMAP TOF points; empirical fits only
log10(steady-state CatMAP TOF of C6H12O_g)
Ha historical formation energy (eV)
linear fit (LOOCV RMSE=11.35)
quadratic fit (LOOCV RMSE=24.97)
segmented fit (LOOCV RMSE=18.33)
linear boundary maximum
quadratic boundary maximum
segmented boundary maximum
